

How to Setup Replication Between ISA Servers

1) Setting Up the Source ISA Server and WebFilter Machine

- i) Launch the ISA Server console
- ii) Right click on the Firewall Policy and select Edit System Policy
- iii) Click the Authentication Services folder
- iv) Un-Check the Enforce strict RPC compliance item
- v) Click OK (There will be a delay of 5 -30 seconds before ISA becomes responsive)

- vi) Click the Apply button to apply the changes

2) Setting up ISA to Allow Connections on The Static Port and the RPC All Interfaces Port

- i) Launch the Microsoft ISA Management Console
- ii) On the left hand pane select "Firewall Policy", then click on the "Tasks" tab in the right hand Pane
- iii) Click on "Create Access Rule", type in a name for the access rule, and then click Next

- iv) Select “Allow” for the rule action and then click Next

The screenshot shows the 'New Access Rule Wizard' window, specifically the 'Rule Action' step. The title bar reads 'New Access Rule Wizard'. Below the title bar, the section is titled 'Rule Action' with a subtitle: 'Select how client requests for content from the specified destination are dealt with if the conditions specified in the rule are met.' There is a small icon of a document with a checkmark. The main area contains the text 'Action to take when rule conditions are met:' followed by two radio button options: 'Allow' (which is selected) and 'Deny'. At the bottom of the window, there are three buttons: '< Back', 'Next >', and 'Cancel'.

- v) In the protocols page, select the “drop down menu under this rule applies to” and select the Selected Protocols option.
- vi) Click the Add button to add a protocol and then select New>Protocol

The screenshot shows the 'New Access Rule Wizard' window, specifically the 'Protocols' step. The title bar reads 'New Access Rule Wizard'. Below the title bar, the section is titled 'Protocols' with a subtitle: 'Select the protocols this rule applies to.' There is a small icon of a document with a checkmark. The main area contains the text 'This rule applies to:' followed by a dropdown menu that currently shows 'Selected protocols'. Below this, the text 'Protocols:' is followed by a large empty rectangular box. To the right of this box are four buttons: 'Add...' (which is circled in red), 'Edit...', 'Remove', and 'Ports...'. At the bottom of the window, there are three buttons: '< Back', 'Next >', and 'Cancel'.

New Protocol Definition Wizard

Primary Connection Information
Which port number, protocol, and direction are used for the primary connection?

Port Range	Protocol Type	Direction

New...
Edit...
Delete

 For protocols used in access rules, protocol direction should be outbound.
For server publishing rules, protocol direction should be inbound.

Help about [creating new protocols](#)

< **Back** **Next** > **Cancel**

- vii) Type in a name for the protocol, then click the New button
- viii) Select TCP for the protocol type and select Outbound for the direction

New/Edit Protocol Connection

Protocol type: **TCP** Protocol Number: **6**

Direction: **Outbound**

Port Range
From: **1250** To: **1250**

ICMP Code: ICMP Type:

OK **Cancel**

- ix) Enter the static port number that you want to use for replication
- x) Click Ok, and then click Next
- xi) Select No to using secondary connections > Next > Finish
- xii) Now you should be returned to the Add protocols window

- xiii) Click on the “+” next to the User Defined folder, select the protocol that you just created and click Add

xiv) Click the “+” next to the All Protocols folder, select RPC (all interfaces) and click Add

xv) Click Close > Next

xvi) In the Access Rules Source screen (From Source), click the Add button

xvii) Click the “+” next to the networks folder and select Local Host > Add > Close > Next

xviii) In the Access Rules Destination screen (Applies to), click the Add button

xix) Click the “+” next to the networks folder and select Internal

- vii) Select the Use Static Endpoint Button and enter the port number you selected for replication. (You previously set this port in step 2)

- viii) Click OK > Apply > OK
ix) Close the Component Services Console

5) Repeat Step 1 From Above to Remove Strict RPC Compliance From the Destination ISA Server

6) Setting up ISA to Allow Connections on The Static Port and the RPC All Interfaces Port on the Destination Server

- i) Launch the Microsoft ISA Management Console
- ii) On the left hand pane select "Firewall Policy", then click on the "Tasks" tab in the right hand Pane
- iii) Click on "Create Access Rule", type in a name for the access rule, and then click Next

- iv) Select “Allow” for the rule action and then click Next

- vii) Type in a name for the protocol, then click the New button
- viii) Select TCP for the protocol type and select Outbound for the direction

- ix) Enter the static port number that you want to use for replication (use the same port that you set previously on the Replication server)
- x) Click Ok, and then click Next
- xi) Select No to using secondary connections > Next > Finish
- xii) Now you should be returned to the Add protocols window

- xiii) Click on the “+” next to the User Defined folder, select the protocol that you just created and click Add

xiv) Click the “+” next to the All Protocols folder, select RPC (all interfaces) and click Add

xv) Click Close > Next

xvi) In the Access Rules Source screen (From Source), click the Add button

xvii) Click the “+” next to the networks folder and select Internal > Add > Close > Next

xviii) In the Access Rules Destination screen (Applies to), click the Add button

xix) Click the “+” next to the networks folder and select Local Host

xx) Click Add > Close > Next

xxi) In the User sets screen, click the Next button

xxii) Click Finish

xxiii) You must Apply the changes you made in ISA for the rule to take effect

7) Repeat Step 3 From Above and Enter the Same Domain Admin Account Into the FStorageSrv Service On the Destination Server
