Question: 1

What program do you use to set up SQL back up jobs?

- A - SQL Profiler
- B - Solomon Database Maintenance
- C - Enterprise Manager
- D - Service Manager

Answer: C

Question: 2

You wish to deploy Solomon in an environment with 34 concurrent users. Which Solomon edition needs to be installed?

- A - Single-User Solomon Standard Edition
- B - Multi-User Solomon Standard Edition
- C - Solomon Enterprise Edition
- D - Solomon Professional

Answer: D

Question: 3

Solomon's access security functions include which of the following?

- A - Controlling who can and cannot log into Solomon.
- B - Enabling and disabling Microsoft Access database security functions.
- C - Identifying Solomon database users and groups.
- D - Controlling who does and does not have access rights to certain Solomon windows.

Answer: A, C, D

Question: 4

Which of the following are key elements of the computer system inventory you should conduct before installing Solomon?

- A - Document network interface card (NIC) data
- B - Verify available RAM meets recommendations
- C - Verify available hard drive space
- D - Verify you have a backup keyboard

Answer: A, B, C

Question: 5

Which of the following cannot be installed from the Solomon CD(s)?

- A - Seagate Crystal Reports
- B - Solomon Tools for Visual Basic
- C - Microsoft SQL Server
- D - Solomon Kernel (SWIM)

Answer: C

Question: 6

Good implementation policies recommend a "pre-installation" process. Which of the following should be included in a pre-installation process?

A - You can optionally activate Microsoft SQL Server's referential integrity capabilities to extend the referential integrity capabilities of Solomon.
B - Protect the data or any current accounting software that Solomon is replacing.
C - Verify adequate hardware and software resources to run Solomon.
D - Obtain the tools and resources used before, during and after the installation of Solomon program files.

Answer: B, C, D

Question: 7

Which Microsoft versions of Windows are supported for a Solomon client installation?

A - Windows 95
B - Windows 2003
C - Windows XP
D - Windows 2000

Answer: B, C, D

Question: 8

What resources does the Solomon Kernel, Swimapi.dll, interface with?

A - Customization Manager module
B - Application modules and report writers
C - Microsoft SQL Server
D - Internet Explorer

Answer: A, B, C

Question: 9

When consulting with a customer in regard to needed hard disk space for Solomon databases, which of the following responses would you choose?

A - A typical system and application database together will not require more than 100 MBs
B - A typical system and application database together will require a minimum of 1 GB required
C - A typical system and application database together need anywhere from 30 GBs to several hundred GBs
D - A typical system and application database together need anywhere from 300 MBs to several GBs

Answer: D

Question: 10

Which of the following can increase a Solomon Application database's hard disk storage requirements?

A - The volume of transactions processed
B - The Solomon modules being used
C - Transaction detail retention settings
D - Installation of application help files

Answer: A, B, C

Question: 11

Which of the following could cause problems with a Solomon installation?

- A - Conflicting .dlls
- B - Inadequate RAM
- C - Using a USB keyboard and mouse
- D - Out of date Windows and SQL Server service packs

Answer: A, B, D

Question: 12

When installing SQL Server to be used with Solomon, you must do which of the following?

- A - Install with the default character set.
- B - Install it on the same server as Solomon.
- C - Set the sa user's password to "Master".
- D - Install with the default sort order

Answer: A, D

Question: 13

Which of the following statements about referential integrity is true?

- A - Referential integrity is programmed into Solomon application windows.
- B - Referential integrity is solely the responsibility of the Solomon System Manager module.
- C - Solomon's referential integrity functions are closely connected to the referential integrity functions provided by Microsoft SQL Server.
- D - You can optionally activate Microsoft SQL Server's referential integrity capabilities to extend the referential integrity capabilities of Solomon.

Answer: A

Question: 14

When analyzing a company for Standard Edition vs. Professional Edition for Solomon, what profiles would be most suitable for Standard Edition?

- A - Use Flexkey capability to segment the Inventory ID
- B - 15 users using Solomon six to eight hours/day
- C - 10 or less users
- D - Need Multi-company processing

Answer: A, C

Question: 15

What Solomon module must be installed and set up for Business Portal to be able to process reports correctly?

- A - General Ledger
- B - Accounts Payable
- C - Accounts Receivable
- D - Application Server

Answer: D

Question: 16

Which of the following could cause problems with a Solomon installation?

- A - Conflicting dlls
- B - Inadequate RAM
- C - Using a USB keyboard and mouse
- D - Out of date Windows and SQL Server service packs

Answer: A, B, D

Question: 17

Where does Solomon store the databases that a workstation last logged into?

- A - Windows Registry
- B - PVRec.csv
- C - Sollnst.cfg
- D - Solomon.ini

Answer: A, B, D

Question: 18

Which option should you select when installing Crystal Reports for use with Solomon?

- A - Local Install (Typical)
- B - Partial Local Install (Custom)
- C - Network Install
- D - Partial Network Install

Answer: A

Question: 19

How many times can you access Solomon while it is in TrialLoc mode before the system will require registration keys to continue using the product?

- A - 25
- B - 20
- C - 10
- D - 5

Answer: B

Question: 20

What backup scheme would be the most efficient for a company that has a high transaction volume that is concerned with the amount of data that could be lost?

- A - A full backup nightly.
- B - A full backup weekly and transaction log backups throughout the day.
- C - A full backup weekly, a differential backup nightly and transaction log backups throughout the day.
- D - A full backup weekly and transaction log backups nightly.

Answer: C

Question: 21

Which standard Solomon application provides the ability to customize a standard Solomon report, such as the General Ledger Trial Balance?

- A - Solomon tools for Visual Basic
- B - Solomon Customization Manager
- C - FRX
- D - Crystal Reports

Answer: D

Question: 22

Which of the following statements about Solomon databases is true?

- A - You can set up a System database and begin defining Solomon no financial data without setting up Application databases.
- B - If you will be using multiple Application databases, Solomon requires you to identify all Application databases before beginning regular Solomon operations.
- C - You need to set up the System database and at least one Application database before beginning regular Solomon operations.
- D - You create the Solomon System database before you sign onto Solomon and then create the Application databases after you sign onto Solomon.

Answer: C

Question: 23

What back up scheme would be best for a company that has a lower transaction volume that is concerned with a fast recovery?

- A - A full backup weekly and transaction log backups throughout the day.
- B - A full backup weekly, a differential backup nightly and transaction log backups throughout the day.
- C - A full backup weekly.
- D - A full backup each night.

Answer: D

Question: 24

Steve has Insert rights to the Journal Transaction screen in Solomon. The Managers group has Update rights to the Journal Transaction screen in Solomon. Steve is a member of the Managers group. Which of the following is true?

- A - Steve will have Insert rights because individual user rights override group rights.
- B - Steve will have Update rights because group rights override individual rights.
- C - Steve will have no rights, because the rights conflict.
- D - Steve is not allowed to be in a group because he has individually assigned rights.

Answer: A

Question: 25

Which of the following statements about FRx installation are false?

- A - FRx program files must be installed on each client workstation.
- B - Universal Naming Convention (UNC) is not supported.
- C - The FRX program icons must be installed in a program folder under the Solomon program folder.
- D - During installation, you can install either the Professional or Desktop editions or FRX.

Answer: A, B, C

Question: 26

What screen resolution is recommended for on-screen display of Solomon windows?

- A - 640 x 480
- B - 800 x 600
- C - 1024 x 768
- D - 1280 x 1024

Answer: C

Question: 27

Which of the following is listed in the correct order from lowest to highest of system security levels?

- A - Solomon security, Network security, Microsoft SQL Server security
- B - Network security, Solomon security, Microsoft SQL Server security
- C - Network Security, Microsoft SQL Server security, Solomon security
- D - There is no "order"; all security functions are at the same level

Answer: C

Question: 28

After installing Solomon, how do you implement SQL Server database security?

- A - Define database security using the administrative tools SQL Server provides for establishing the logical security layer
- B - Log into Solomon and apply a password in the Database Administration screen
- C - Select Set SQL Server security from the NT Administrative Tools, Administrative Wizard
- D - Changing the Solomon SYSADMIN password activates SQL security

Answer: B

Question: 29

Which of the following are true statements about Solomon product registration?

- A - Solomon must be registered immediately after you install the programs and set up your first System-Application database.
- B - If the company name on the registration screen is changed, the current unlocking keys will no longer be valid.
- C - Registering Solomon does not erase or alter any of the financial data stored in a database prior to registration.
- D - If Solomon is not registered within 20 database accesses, Solomon automatically makes the database inaccessible.

Answer: B, C, D

Question: 30

When you start the Solomon Setup program, which action does Setup perform automatically?

- A - Shut down any other currently running Windows applications
- B - Determine whether or not the server needs a newer version of OLE
- C - Detect whether or not Microsoft SQL Server is installed and prompt you to install it if it is not
- D - Open the Welcome window on first-time installations; open the Select Solomon

Answer: B

Question: 31

If you are working in one Application database and want to begin working in another Application database how do you login to the new company?

- A - Exit Solomon after saving all changes; then start a new session choosing the new company.
- B - Use Solomon's Close Company function to close the current database; then, use the Open Company command to open the new database.
- C - Simply use Solomon's Open Company function; Solomon supports multiple Application databases open at the same time.
- D - Use the Switch Company icon to exit and login to a new company.

Answer: A, B, D

Question: 32

How can you access the inquiry window on a field that supports this feature?

- A - Press the F3 key.
- B - Click the Inquiry button next to the field.
- C - Press the F4 key.
- D - Double right click in the field.

Answer: A, C

Question: 33

Which Solomon toolbar button(s) would you click to save the current record and prepare for entry of a new record?

- A - Save +New
- B - Close + New
- C - Close
- D - Finish

Answer: A, D

Question: 34

Which of the following items should be included in the regular Solomon database backup procedure?

- A - Microsoft Access database files
- B - Third party Solomon product data files
- C - Custom Solomon report definitions
- D - Lotus Notes database files

Answer: B, C

Question: 35

Which of the following statements are true with regard to backing-up Solomon program and data files?

- A - The System and the Application databases should be backed-up on a daily basis.
- B - The Solomon\Usr_Rpts directory should be backed-up whenever a report is customized.
- C - Program files can be backed-up but it is not absolutely necessary as they may also be reinstalled from the CD-ROM.
- D - It is only necessary to backup application databases.

Answer: A, B, C

Question: 36

Which of the following is NOT a Solomon Edit menu function?

- A - Cut
- B - Copy
- C - Select All
- D - Initialize

Answer: C, D

Question: 37

Which of the multi-item selection techniques are supported when a Solomon window is in grid view?

- A - Left mouse click and drag
- B - Right mouse click and drag
- C - CTRL and arrow keys
- D - Right mouse click and enter row numbers to copy

Answer: A

Question: 38

What Solomon window would you open to setup and maintain the relationship between system and application databases?

- A - Event Log Viewer (95.290.00)
- B - Database Administration (98.270.00)
- C - Database Physical Integrity (95.500.00)
- D - Database Update (DB.UPD.ATE)

Answer: B

Question: 39

What is the purpose of the Solomon Navigation Level function?

- A - Control how the cursor moves through a Solomon window when you are pressing the TAB key.
- B - Rearrange the order Solomon modules are listed on the Module menu according to userspecified settings.
- C - Establish user-defined settings that automatically open certain Solomon windows when the user logs into Solomon.
- D - Control how Solomon accesses batch or document records.

Answer: D

Question: 40

Which of the following is a standard Solomon reporting function?

- A - Print to File
- B - Convert to a Microsoft Word Document
- C - Save As Default
- D - Use Windows Default Printer

Answer: A, C, D

Question: 41

What is a Solomon template?

- A - A general Solomon window customization that series as the basis for user-specific customizations of the same window.
- B - An Application database that contains core data (accounts, sub accounts, etc.) used by all Application databases from which you can quickly create other Application databases.
- C - A set of commonly used window data saved and entered as a block to help reduce a repetitive keying in the window.
- D - The default settings from Solomon application setup windows that appear in Solomon data entry and maintenance windows.

Answer: C

Question: 42

Which of the following situations would prompt you to run a module integrity check?

- A - Customer balance in Customer Maintenance does not match the total of documents on the Customer Trial Balance Report
- B - Accounts Receivables history does not correspond to documents
- C - Users receive an error when they attempt to open an Accounts Receivable screen
- D - Un-released Accounts Payables batches are not showing the vendor history

Answer: A, B

Question: 43

Which of the following methods efficiently duplicates frequently used data in Solomon screens?

- A - Alt-Print Screen
- B - Templates
- C - Control-Print Screen
- D - Tabs

Answer: B

Question: 44

Which Solomon menu would you open to import data from other applications?

- A - File - Import
- B - Module - Transaction Import
- C - Utility - Transaction Import
- D - Edit - Import Data

Answer: C

Question: 45

What is the extent of Solomon's module-level logical integrity checking capabilities?

- A - Compare
- B - Validate
- C - Rebuild Indexes
- D - Delete Indexes

Answer: A, B

Question: 46

Which of the following is NOT maintained in the Solomon event log?

- A - Process and user IDs
- B - Corrective actions for events with errors
- C - Process execution date
- D - Log view date

Answer: B

Question: 47

If a module's logical integrity check reports an integrity error, what options do you have to correct it?

- A - Manually change the data table
- B - Rewrite the record to match the contents of the data file
- C - Add another record
- D - Re-execute the module's integrity check, this time running the correct or re-build option

Answer: D

Question: 48

What is the purpose of a Solomon test installation?

- A - To create an online backup of the Solomon installation
- B - To provide a test environment for creating templates, developing customizations and testing updates before they are installed on the working installation
- C - To provide a single user working copy of the Solomon system to use in the event of a network system failure
- D - There is no benefit to creating a test installation

Answer: B

Question: 49

How do you change the password for the Master user?

- A - Use Microsoft Enterprise Manager to change the password for the Master Login.
- B - Log into Solomon as Sysadmin and then open the Change Password screen on the Utility menu.
- C - Open the Database Administration screen and change the password on the line with a blank Database Name field.
- D - Master's password can not be changed after it is set during the initial creation of the database.

Answer: C

Question: 50

Which of the following are true of Solomon templates?

- A - The template level options are the same for all Solomon windows.
- B - Templates can be private or public.
- C - Templates can be created for reports as well as data entry, maintenance, and setup windows.
- D - Templates are not a feature of Solomon.

Answer: B, C

Question: 51

What resources does the Solomon Kernel, Swimapi.dll, interface with?

- A - Customization Manager module
- B - Application modules and report writers
- C - Microsoft SQL Server
- D - Internet Explorer

Answer: A, B, C

Question: 52

What is the primary reason for installing additional servers in the Solomon hardware environment?

- A - To offload printing, email and file services from the main database server
- B - To make more hard disk storage space available
- C - To allow for duplicate data entry
- D - To provide a redundant environment that would prevent a total system failure in the event of a server crash

Answer: A

Question: 53

What is the purpose of Solomon's two-database design?

- A - Provide data redundancy that protects the financial data in the event of a system crash.
- B - Maintain system data separately from financial data for storage and operating efficiency.
- C - Allows Solomon to distribute data evenly across databases.
- D - Permit multiple Application databases to coexist on the same computer system.

Answer: B, D

Question: 54

When consulting with a customer in regard to needed hard disk space for Solomon databases, which of the following responses would you choose?

- A - A typical system and application database together will not require more than 100 MBs
- B - A typical system and application database together will require a minimum of 1 GB required
- C - A typical system and application database together need anywhere from 30 GBs to several hundred GBs
- D - A typical system and application database together need anywhere from 300 MBs to several GBs

Answer: D

Question: 55

Which Microsoft versions of Windows are supported for a Solomon client installation?

- A - Windows 95
- B - Windows 2003
- C - Windows XP
- D - Windows 2000

Answer: B, C, D

Question: 56

Which of the following can increase a Solomon Application database's hard disk storage requirements?

- A. The volume of transactions processed
- B - The Solomon modules being used
- C - Transaction detail retention settings
- D - Installation of application help files

Answer: A, B, C

Question: 57

Which of the following statements about the Solomon System database is false?

- A - The System database contains Solomon product registrations, security settings and database field attributes.
- B - The System database does contain some accounting data.
- C - A separate System database must be created for each Application database you define.
- D - The System database eliminates the need for redundant system-level information in Application databases.

Answer: C

Question: 58

Which of the following statements are true of the Solomon Implementation plan?

- A - The larger the Solomon installation, the lesser the importance of a well-defined implementation plan.
- B - A good implementation plan clearly defines for everyone involved exactly what is to happen once the Solomon installation begins.
- C - All implementation plans are alike; your original plan will work for every Solomon installation there after.
- D - The Solomon Implementation plan clearly identifies and documents customer goals and objectives.

Answer: B, D

Question: 59

When analyzing a company for Standard Edition vs. Professional Edition for Solomon, what profiles would be most suitable for Standard Edition?

- A - Use Flexkey capability to segment the Inventory ID
- B - 15 users using Solomon six to eight hours/day
- C - 10 or less users
- D - Need Multi-company processing

Answer: A, C

Question: 60

Which of the following are SQL Server back up types?

- A - Full database backup
- B - Transaction log backup
- C - Differential back up
- D - Nightly Backup

Answer: A, B, C

Question: 61

What are good ways to optimize Solomon performance in the Windows environment on the

server?

- A - Decrease conventional memory as much as possible
- B - In the Systems Properties, set the Performance Options to optimize performance for Background Services
- C - Allocate more memory to SQL server
- D - In the Systems Properties, set the Performance Options to optimize performance for Application

Answer: B, C, D

Question: 62

You wish to deploy Solomon in an environment with 34 concurrent users. Which Solomon edition needs to be installed?

- A - Single-User Solomon Standard Edition
- B - Multi-User Solomon Standard Edition
- C - Solomon Enterprise Edition
- D - Solomon Professional

Answer: D

Question: 63

What remote connectivity solutions does Solomon support running on?

- A - The client installed on a workstation that is connected to the server by a T1 line. (WAN)
- B - Windows Terminal Server
- C - PC Anywhere
- D - A dial up connection

Answer: B

Question: 64

Solomon's access security functions include which of the following?

- A - Controlling who can and cannot log into Solomon.
- B - Enabling and disabling Microsoft Access database security functions.
- C - Identifying Solomon database users and groups.
- D - Controlling who does and does not have access rights to certain Solomon windows.

Answer: A, C, D

Question: 65

The Solomon Tools for Visual Basic module includes which of the following?

- A - Visual Basic
- B - Schema Creation Utilities
- C - Screen Painter
- D - Seagate Crystal Reports

Answer: B, C

Question: 66

What screen resolution is recommended for on-screen display of Solomon windows?

- A - 640 x 480

- B - 800 x 600
- C - 1024 x 768
- D - 1280 x 1024

Answer: C

Question: 67

Which is the correct order of Solomon user access rights from most to least restrictive?

- A - View, insert, update, delete, initialization
- B - View, update, insert, initialization, delete
- C - View, update, insert, delete, initialization
- D - View, update, delete, insert, initialization

Answer: C

Question: 68

Which of the following statements about FRx installation are false?

- A - FRx program files must be installed on each client workstation.
- B - Universal Naming Convention (UNC) is not supported.
- C - The FRx program icons must be installed in a program folder under the Solomon program folder.
- D - During installation, you can install either the Professional or Desktop editions of FRx.

Answer: A, B, C

Question: 69

What two Solomon registration keys are required?

- A - General Ledger and Accounts Payable
- B - General Ledger and System Manager
- C - System Manager, General Ledger, Accounts Payable and Accounts Receivable
- D - System Manager and FRX

Answer: B

Question: 70

In a Solomon environment, which user is logged into SQL Server during Solomon?

- A - "Administrator"
- B - SQL Server
- C - "SYSADMIN"
- D - "Master"

Answer: D

Question: 71

What back up scheme would be best for a company that has a lower transaction volume that is concerned with a fast recovery?

- A - A full backup weekly and transaction log backups throughout the day.
- B - A full backup weekly, a differential backup nightly and transaction log backups throughout the day.
- C - A full backup weekly.
- D - A full backup each night.

Answer: D

Question: 72

Which of the following are true statements about Solomon product registration?

- A - Solomon must be registered immediately after you install the programs and set up your first System-Application database.
- B - If the company name on the registration screen is changed, the current unlocking keys will no longer be valid.
- C - Registering Solomon does not erase or alter any of the financial data stored in a database prior to registration.
- D - If Solomon is not registered within 20 database accesses, Solomon automatically makes the database inaccessible

Answer: B, C, D

Question: 73

Which of the following could cause problems with a Solomon installation?

- A - Conflicting .dlls
- B - Inadequate RAM
- C - Using a USB keyboard and mouse
- D - Out of date Windows and SQL Server service packs

Answer: A, B, D

Question: 74

Which of the following is the recommended way to install Solomon supporting products?

- A - Double-click their setup program icon from the appropriate directory on the Solomon CD.
- B - Simply follow the prompts; Solomon Setup automatically starts each supporting products setup program as soon as installation of Solomon is complete.
- C - Select each products installation option from the opening Solomon Installation window that displays when you start the Solomon CD.
- D - Choose Start - Run, type in or browse to the appropriate path and file name, and click OK.

Answer: C

Question: 75

Which standard Solomon application provides the ability to customize a standard Solomon report, such as the General Ledger Trial Balance?

- A - Solomon tools for Visual Basic
- B - Solomon Customization Manager
- C - FRx
- D - Crystal Reports

Answer: D

Question: 76

Which option should you select when installing Crystal Reports for use with Solomon?

- A - Local Install (Typical)
- B - Partial Local Install (Custom)
- C - Network Install
- D - Partial Network Install

Answer: A

Question: 77

How many times can you access Solomon while it is in TrialLoc mode before the system will require registration keys to continue using the product?

- A - 25
- B - 20
- C - 10
- D - 5

Answer: B

Question: 78

When you start the Solomon Setup program, which action does Setup perform automatically?

- A - Shut down any other currently running Windows applications
- B - Determine whether or not the server needs a newer version of OLE
- C - Detect whether or not Microsoft SQL Server is installed and prompt you to install it if it is not
- D - Open the Welcome window on first-time installations; open the Select Solomon

Answer: B

Question: 79

Which of the following is listed in the correct order from lowest to highest of system security levels?

- A - Solomon security, Network security, Microsoft SQL Server security
- B - Network security, Solomon security, Microsoft SQL Server security
- C - Network Security, Microsoft SQL Server security, Solomon security
- D - There is no "order" all security functions are at the same level

Answer: C

Question: 80

Steve has Insert rights to the Journal Transaction screen in Solomon. The Managers group has Update rights to the Journal Transaction screen in Solomon. Steve is a member of the Managers group. Which of the following is true?

- A - Steve will have Insert rights because individual user rights override group rights.
- B - Steve will have Update rights because group rights override individual rights.
- C - Steve will have no rights, because the rights conflict.
- D - Steve is not allowed to be in a group because he has individually assigned rights.

Answer: A

Question: 81

What is the purpose of a Solomon test installation?

- A - To create an online backup of the Solomon installation
- B - To provide a test environment for creating templates, developing customizations and testing updates before they are installed on the working installation
- C - To provide a single user working copy of the Solomon system to use in the event of a network system failure
- D - There is no benefit to creating a test installation

Answer: B

Question: 82

How do you change the password for the Master user?

- A - Use Microsoft Enterprise Manager to change the password for the Master Login.
- B - Log into Solomon as Sysadmin and then open the Change Password screen on the Utility menu.
- C - Open the Database Administration screen and change the password on the line with a blank Database Name field.
- D - Master's password can not be changed after it is set during the initial creation of the database.

Answer: C

Question: 83

Which of the following is true of Solomon's multi-item copy and paste functions?

- A - The multi-item selection can only be copied from an existing record to a new record in the same Solomon window.
- B - Multi-items selected and copied in a random pattern must be pasted into their destination using the same random pattern.
- C - If the copying order of a multi-item selection is sequential, the pasting order does not have to be specified as long as the destination is using the same sequential order.
- D - Multi-item selections do not include system calculated items.

Answer: C, D

Question: 84

Which of the following is a standard Solomon reporting function?

- A - Print to File
- B - Convert to a Microsoft Word Document
- C - Save As Default
- D - Use Windows Default Printer

Answer: A, C, D

Question: 85

Solomon's extended report options include which of the following?

- A - Options for sorting and selecting
- B - Solomon short-cut keys
- C - Total and page break settings
- D - Options for deleting records

Answer: A, C

Question: 86

Which of the following items should be included in the regular Solomon database backup procedure?

- A - Microsoft Access database files
- B - Third party Solomon product data files
- C - Custom Solomon report definitions
- D - Lotus Notes database files

Answer: B, C

Question: 87

Which Solomon menu would you open to import data from other applications?

- A - File - Import
- B - Module - Transaction Import
- C - Utility - Transaction Import
- D - Edit - Import Data

Answer: C

Question: 88

Which of the following statements are true with regard to backing-up Solomon program and data files?

- A - The System and the Application databases should be backed-up on a daily basis.
- B - The Solomon\Usr_Rpts directory should be backed-up whenever a report is customized.
- C - Program files can be backed-up but it is not absolutely necessary as they may also be reinstalled from the CD-ROM.
- D - It is only necessary to backup application databases.

Answer: A, B, C

Question: 89
